SUMMARY

AI and full-stack engineer who ships complete products. I built and launched **Kavvi**, an AI study platform, on my own: **155 students, 540+ AI-built lessons and paying customers in its first two weeks**. At Robotics Corner I took unfinished prototypes to production-ready platforms on one shared database with single sign-on. I work across React, Node.js, Python, databases and Linux infrastructure, and use AI-assisted workflows to learn new tools and ship fast.

EXPERIENCE

Founder & Engineer — Kavvi (kavvi.io), remote — Oct 2025 – Present

- Designed, built and launched, solo, a bilingual (Arabic/English) AI study platform for Egyptian university students. Launched Sep 2026; **155 registered students, 165 subjects, 541 generated lessons and 3 paying customers** in the first two weeks.
- Turns uploaded lectures (PDF, PPTX, DOCX, images) into lessons, concept checks and study plans using a Python retrieval (RAG) service and LLM APIs; ~2,700 concepts explained so far.
- Built photo-based **answer cards with verification**: each question is solved twice independently, compared, and re-checked by a stronger model when the answers disagree.
- Built the business layer: subscriptions paid by InstaPay/wallet with receipt upload, fraud flags, instant provisional access and admin review, plus plan limits and usage metering.
- Runs production on a Linux VPS with Docker Compose (Node/Express API, React PWA, Python service, MongoDB, Valkey/BullMQ, Caddy), with sandboxed Playwright tests and one-command rollbacks.
- Grew the user base organically with short-form videos I scripted and produced; one reached 33K views on TikTok.

Software Engineer — Robotics Corner (roboticscorner.tech), Cairo — Jan 2026 – Oct 2026

- Took five products from buggy prototypes to deployment-ready, all on **one shared database with single sign-on**; shipped the company website and the HR/CRM system to production.
- Built the HR/CRM platform: role-based access, lead pipeline and workflow automation, financial validation and HR workflows (React, Node.js, Express).
- Built RoboConnect, an Upwork-style marketplace for robotics work: dual-role dashboards, real-time messaging, Paymob escrow payments, AI CV parsing, and a 17-table PostgreSQL schema secured with Supabase row-level security.
- Built ConnectedLabs, remote access to physical robots over SSH: secure provisioning, telemetry logging and systemd services, deployed with Docker, Nginx and Jenkins CI/CD.
- Worked on RoboAgent, an agentic coding assistant for robotics built on a VS Code/Electron fork, and built its web platform, where users describe a project, get it generated and download it as a ZIP, with plans and usage tracking.

FREELANCE PROJECTS

El-Bahrawy — el-bahrawy.com — Live

- Built alone, end to end, a bilingual English-learning platform for a teacher: lessons by grade (7–12), videos, practice after each concept, quizzes, PDF material, progress tracking and student accounts (Next.js, NestJS, PostgreSQL/Prisma).

Abnaa Hamdallah — business system — Live

- Built and deployed a live management system for a sanitary-ware store.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, PHP
Frontend	React, Next.js, Vite, Tailwind CSS, PWAs, bilingual RTL/LTR interfaces
Backend	Node.js, Express, NestJS, REST APIs, background jobs, payments, Laravel, Electron
AI	LLM applications, RAG, vision (photo questions), text-to-speech, agentic coding workflows
Data & infra	PostgreSQL, MongoDB, Supabase, Prisma, SQLite, Redis/Valkey, Docker, Linux, Nginx, Caddy, Jenkins CI/CD, Playwright

EDUCATION & LANGUAGES

B.Sc. Mechatronics & Robotics Engineering — Helwan National University, Cairo — Expected 2029 · GPA 3.1 / 4.0

Arabic (native) · English (C1) · German (B1) · French (A2)
