SUMMARY

Full-stack and AI engineer who ships products end to end. Built **Kavvi** solo, an AI learning platform with **458 sign-ups and 8+ paying subscribers within five weeks of launch**. At Robotics Corner, took **six unfinished products to working software, four in production**, on one shared database with single sign-on. Strong in React, Node.js, Python, PostgreSQL/MongoDB and Docker/Linux; comfortable owning design, backend, deployment and users.

WORK EXPERIENCE

Founder & Full-Stack Engineer — Kavvi (kavvi.io), remote — Oct 2025 – Present

- Designed, built and launched solo a bilingual (Arabic/English, RTL) AI learning platform: **458 sign-ups, 8+ paying subscribers, 8,300+ AI runs and 4,900+ generated concepts** since the Sep 2026 launch, with positive user feedback.
- Built the AI pipeline: lectures and photos (PDF, PPTX, DOCX, images) go through a Python RAG service and LLM APIs to become lessons, concept checks, exams and study plans.
- Built **answer verification**: every question is solved twice independently and compared, with a stronger model re-checking disagreements to cut wrong answers.
- Controlled AI cost by routing across several LLM providers by quality and price, with per-plan budgets and a daily spend cap: **about 4.5 EGP (~$0.09) per learner**.
- Built billing: InstaPay/wallet payments with receipt upload, fraud flags, provisional access and admin review, plus card payments, plan limits and usage metering.
- Run production alone on a Linux VPS (Docker Compose, Node/Express, React PWA, Python, MongoDB, Valkey/BullMQ, Caddy) with Playwright tests and one-command rollbacks; grew users organically with short videos (33K-view TikTok).

Software Engineer — Robotics Corner (roboticscorner.tech), Cairo — Jan 2026 – Sep 2026

- Took six half-built products to working software, **four production-ready**, unified under **one shared database and single sign-on** across all company sites.
- Rebuilt the non-functional **HR/CRM system** (React, Node.js, Express): role-based access, lead pipeline, workflow automation and HR workflows. The whole company used it daily.
- Built and shipped the **company website** and **ConnectedLabs** end to end: remote access to physical robots over SSH with secure provisioning, telemetry and systemd services (Docker, Nginx, Jenkins CI/CD).
- Finished **RoboConnect**, an Upwork-style marketplace for robotics work: dual-role dashboards, real-time messaging, Paymob escrow, AI CV parsing, and a 17-table PostgreSQL schema with Supabase row-level security.
- Contributed to **RoboAgent**, an agentic coding IDE (VS Code/Electron fork) with planning and coding modes, and built its web platform: describe a project, get it generated, download it as a ZIP, with plans and usage tracking.

PROJECTS

El-Bahrawy (el-bahrawy.com) — 2026

- Built alone, end to end, a live bilingual English-learning platform for a teacher: lessons by grade, videos, quizzes, PDFs, progress tracking and student accounts (Next.js, NestJS, PostgreSQL).

Abnaa Hamdallah — 2026

- Built and deployed a live management system for a sanitary-ware store.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, PHP
Frontend	React, Next.js, Vite, Tailwind CSS, PWAs, RTL/LTR bilingual UI
Backend	Node.js, Express, NestJS, REST APIs, background jobs, payments, Laravel, Electron
AI	LLM apps, RAG, vision, text-to-speech, agentic coding workflows, cost control
Data & infra	PostgreSQL, MongoDB, Supabase, Prisma, Redis/Valkey, Docker, Linux, Nginx, Caddy, Jenkins CI/CD, Playwright

EDUCATION & LANGUAGES

B.Sc. Mechatronics & Robotics Engineering — Helwan National University, Cairo — Expected 2029 · GPA 3.1 / 4.0

Arabic (native) · English (C1) · German (B1) · French (A2)
